

Decorative water features & fountains add beauty, ambience & tranquility. If left untreated harmful micro organisms will form.

The TankPro water sterilizing unit is a simple & effective way of controlling & maintaining water borne diseases found in water features & fountains. With the reuse of continually circulated water harmful micro-organisms, algae & slime eventually form.

The TankPro Unit provides 24 hour onsite chlorination to the circulating water, eliminating water borne bacterial growth.*

- Provides 24 hour on-site chlorination of the water feature or fountain water circuit.
- Kills all harmful bacteria, viruses and other harmful water borne micro-organisms in the water, preventing algae and slime buildup.
- Maintains water in a clean, clear, sterile state.
- Eliminates the need to manually purchase, handle and store dangerous chlorine chemicals as well as being very economical to run.

* Very low quantities of specially formulated TankPro Boost may be added to the water to increase efficiency of unit & chlorine production.
